Flag 1 of 18: Compromised Denver Endpoint

FAKEUPDATES scenario · Cymbal Investments · Google SecOps SIEM

Question

What is the hostname of the compromised endpoint in the Denver office?

Answer

CYM-DEN-W10-042.CYMBAL.CORP

Evidence

- The Detection Viewer for alert ID 39 (PowerShell Download and Execute) showed `victim_name` as `CYM-DEN-W10-042.cymbal.corp`.
- A hostname search returned 11 results, all detections for that host.
- The host IP is `10.240.32.115` and the affected user is `marcus.vance`.
- The entity highlighted in the original alert link, `cym-ci-runner-01.cymbal.corp`, was a distractor. A CI runner is not a Denver endpoint.

How it was found

```
hostname = "CYM-DEN-W10-042.CYMBAL.CORP" nocase
```

Window: Oct 14 to Oct 16, 2026. The alert listed three PowerShell download-and-execute detections on this host.

Lesson

Read the victim field of the detection. The entity selected in the UI is not always the compromised host.

Next pivot

Use the host, IP and user to look backward for the download that preceded the PowerShell execution.
